

SITE PLAN

The plan below is a typical site plan of a double storey home showing the location of the proposed carport and patio.

Site plans enable the Fluid team to see where the proposed structure will be constructed on the property and to ensure it complies with building codes and regulation.

It is important (when drawing a site plan) to note all structures within the property boundary, including the existing house and any other structures (i.e. sheds, patios, carports, even trees) and any known service networks.
